

Step 1:

We need to have Node.js installed in our local machine from <https://nodejs.org/en/>

Step 2:

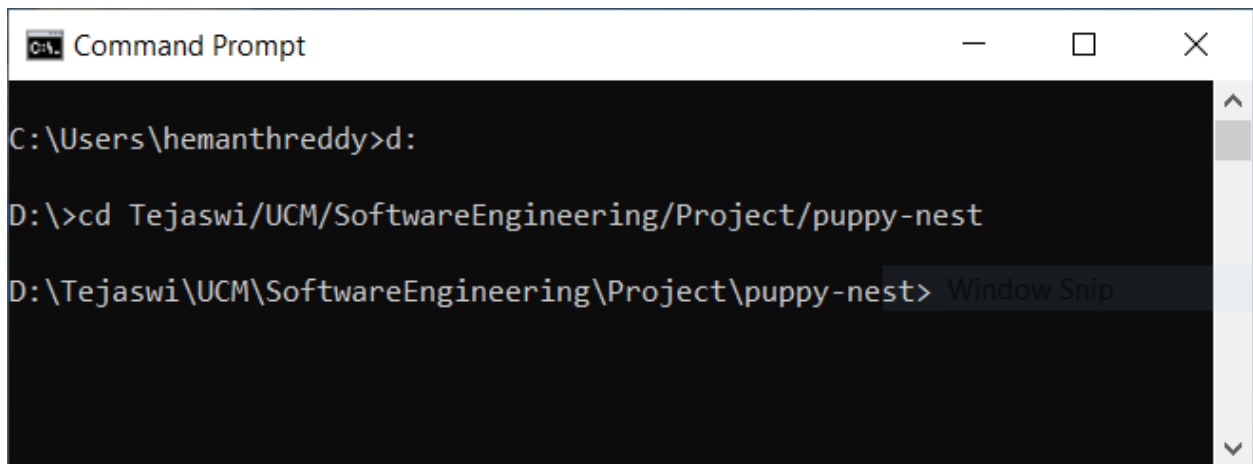

Test whether the installation is successful in command prompt by running the below command:

node -v

Step 3:

Open the command prompt window and navigate to the project folder

Example:

A screenshot of a Windows Command Prompt window. The title bar reads "Command Prompt". The command history shows the user navigating from the C: drive to the D: drive and then to a specific project folder. The text is as follows:
C:\Users\hemanthreddy>d:
D:\>cd Tejaswi/UCM/SoftwareEngineering/Project/puppy-nest
D:\Tejaswi\UCM\SoftwareEngineering\Project\puppy-nest> Window Snip

Step 4:

Install your packages using the below commands

npm Install & npm install -g @angular/cli

Step 5:

Compile and serve using the below command

ng serve --port 4200 -open
